Product Images

Description

The passive temperature expansion kit can be used to apply positive pressure to the temperature control circuit in the system. This allows the boiling point of the THERMAL HL30 temperature control medium (water-glycol mixture) to be increased and thus the working temperature to be extended up to +150°C. The integrated precision pressure regulator ensures exact regulation of the required pressure and thus enables highly accurate temperature control. When using the passive expansion kit, a suitable compressed air connection must be provided by the user.

Additional Information

No.	JN-0771
Manufacturer (Brand)	Julabo
EAN	4058072843045
Transport temperature	Room temperature
Country of origin	Germany
Customs tariff number	84199085
