Description

The **XXprep Kit for DNA fragments** (from PCR reactions & agarose gels) has been developed for the efficient extraction of DNA fragments from TAE or TBE agarose gels and utilizes a novel 2-step technology for purification of amplification products from PCR reaction mixtures and sequencing reaction mixtures.

The Spin Filter column has a binding capacity of over 20 µg, allowing high yield and excellent quality in DNA fragment isolation.

Recovery rates are up to 95% depending on fragment size.

Other features:

easy handling, flexible choice of elution volume and fast purification protocols

Advantages:

- Combi Kit
- PCR purification in a two-step procedure (without unnecessary washing)
- reduced use of plastics
- minimal elution volumes (up to 10 µl)

Additional Information

No.	5482RC050
Manufacturer (Brand)	neoFroxx
EAN	4066306030345
Transport temperature	Room temperature
autoclavable at 121°C	No
sterile	No
