Description

The SERVAGel™ TG PRIME™ 8 - 16 % ready-to-use gel has a proprietary modified tris/glycine buffer system that not only guarantees a significantly extended shelf life compared to classical Laemmli tris/glycine gels, but also allows short electrophoresis times when using standard tris/glycine sample and run buffers (2 gels, 35 min at 250 V const.). It can be used under native and denaturing conditions. The separation range is between 10 up to 100 kDa. The 2D gel has a planar sample pocket for optimal transfer of proteins to the 2nd dimension. For the first dimension, IPG strips with 7 cm length can be used.

Additional Information

No.	SV-0155
Manufacturer (Brand)	SERVA
EAN	4058072372927
Transport temperature	Wet ice
Number of wells	1
Thickness	1 mm
