Description

Moonlab® brand crystal clear serological pipettes are manufactured from high quality polystyrene in a clean room environment. In addition, the serological pipettes are sterilized and individually packaged in easy-to-open foil/paper peel bags. This prevents contamination of your samples with unwanted substances (RNases, DNases, pyrogens). In the mouthpiece, cotton swabs provide protection against unwanted contamination of the pipetting aid.

- Color coding facilitates identification of the correct pipette
- Larger pipetting volume due to negative scaling
- Universal mouthpiece for precise insertion into pipetting aids

Additional Information

No.	4-0132
