Description

The temperature mini-indicators are self-adhesive, temperature-sensitive foils that react with color change to specific temperature overshoots. They are ideal for temperature monitoring of products and processes where a specific temperature should not be exceeded, e.g. for moving or small objects or for long-term monitoring. The mini-indicators in use The temperature mini-indicators are supplied in a booklet of 10 each. They can be easily detached from the booklet like stickers and stuck onto the object to be measured. On the mini-indicators you can see the temperature points +143 °C; +149 °C; +154 °C; +160 °C; +166 °C. As soon as a certain temperature point is exceeded, the mini-indicator turns color in the relevant points within 2 to 3 seconds. The coloration is irreversible: once the temperature has been exceeded, the mini-indicator does not change color even if the temperature drops again. In this way, critical temperature overshoots can be read even after a longer period of time. Do you need mini-indicators for monitoring other temperature ranges? We also have the following measuring ranges in our product range: +60 ... +82 °C +88 ... +110 °C +116 ... +138 °C +171 ... +193 °C +199 ... +224 °C
