

## Bürkle® StopCock PA conductive, unionm.3/4"-angle/grommet

### Product Images

### Description

Commercially available drain cocks made of polyethylene or polypropylene cannot be used for solvents. The StopCock PA drain cock is made of electrically conductive polyamide and is therefore ideally suited for solvents. StopCock PA fits 3/4" male threads and, with the included adapter, 3/4" female threads, and thus fits almost all commercially available canisters and drums with bottom drain threads. The StopCock drain cocks fit all containers with G 3/4" connection thread. With thread adapters, the taps can be connected to almost all other containers. With outlet angle and rotatable drip stop valve With reducing outlet spout for narrow bottle openings, 6-8 mm outer diameter Wetted parts PA electrically conductive and PTFE Delivery includes electrically conductive PA adapter for 3/4" female thread Absolutely leak-proof Especially smooth-running With connection union nut, guarantees vertical position of the stopcock Pressure-resistant up to 2 bar at 20 °C (without outlet angle and spout) "Note list of chemical resistances"!
