Product Images

Description

this disc cutter rotor with indexable inserts and fixed knives made of carbide tungsten carbide withstands the highest stresses and offers the greatest stability of the knives. This rotor is even suitable for shredding PCB scrap with glass fiber residues. Alternatively, a rotor with V-cutting edges and counter-knives made of hardmetal tungsten carbide is offered, which additionally comminutes the sample by impact/shearing action, while the standard rotor with V-cutting edges and counter-knives made of tool steel comminutes the sample by pure cutting action. For sample preparation according to RoHS and WEEE (e.g. for the detection of hexavalent chromium) and for XRF analysis, we recommend our cutting tool sets made of chromium-free tool steel.

Additional Information

No.	FR-0629
Manufacturer (Brand)	Fritsch
Transport temperature	Room temperature
