Product Images

Description

this rotor with V-cutting edges and fixed knives made of hardmetal tungsten carbide comminutes the material to be ground by a gentle cutting action and additionally by an impact/shearing action. Alternatively, a rotor with V-cutting edges and counter-knives made of tool steel is offered, which comminutes the material to be ground by a pure cutting action only. As an extension to this, the disc cutter rotor with indexable inserts and fixed knives made of hardmetal tungsten carbide withstands the highest stresses and offers the greatest stability of the knives. This rotor is even suitable for shredding PCB scrap with glass fiber residues. For sample preparation according to RoHS and WEEE (e.g. for the detection of hexavalent chromium) and for XRF analysis, we recommend our cutting tool sets made of chromium-free tool steel.

Additional Information

No.	FR-0630
Manufacturer (Brand)	Fritsch
Transport temperature	Room temperature
