

Testo® CO ambient probe

Product Images

Description

Be warned of CO concentrations that are dangerous to humans. Because before entering a heating room, due to a leakage or similar. There may be a danger to the life of the installer before he enters the room. In addition, common sources of CO include tobacco smoke, gasoline heaters, faulty space heaters, and car exhausts. Carbon monoxide is a colorless, odorless, tasteless gas and one of the most toxic substances in indoor air. The gas prevents the brain from receiving oxygen and in high amounts can cause nausea; unconsciousness and even death. CO measurement provides you with clarity about the carbon monoxide content in the indoor air.
