

Testo® 605-H1 - Thermo hygrometer

Product Images

Description

If you are looking for a compact and easy-to-use thermo-hygrometer, the testo 605-H1 is the ideal choice. It measures relative humidity and air temperature and also calculates the dew point in the range between -20 and +50 °Ctd. The built-in testo humidity sensor ensures reliable and long-term stable measurement results. The thermo-hygrometer is suitable for control measurements in production, storage, office and server rooms. The testo 605-H1 is particularly practical for measurements in the ventilation duct; as it has a permanently mounted sensor tube (length: 125 mm). Thanks to the bracket supplied, you can position and fix the sensor tube at the desired point in the ventilation duct. In this way, you can take your measurements without having to hold the thermo-hygrometer. The design of the testo 605-H1 temperature and humidity meter has been thought through down to the last detail: the display can be swivelled into different positions and allows you to read the measured values conveniently. When you are not using the testo 605-H1, the rotating protective cap at the end of the probe tube protects the sensor from mechanical stress.

Additional Information

No.	TO-0092
Manufacturer (Brand)	Testo
VGKL number	100946053
