**qpore® transfer membrane made of CN, 0.45
µm, 300 x 3000 mm roll**

**€299.00
plus VAT &
Shipping**

Product Images

Description

qpore® offers an extensive range of transfer membranes made of different materials for diverse applications in your laboratory. All membranes are manufactured under highest quality standards from best raw materials.

This qpore® transfer membrane made of cellulose nitrate (CN) is 100% pure and contains no foreign substances, enabling background-free blots with optimal bands. Transfer membranes made of CN with a pore size of 0.45 µm are the general laboratory standard and suitable for most applications with protein or nucleic acids > 20 kDa. The high protein binding capacity prevents bleed-through during transfer and allows detection of even the smallest amounts of protein.

Features:

- Dimensions roll: 300 x 3000 mm
- Membrane thickness approx. 150 µm ± 10 µm
- Binding capacity for proteins: approx. 125 µg/cm²
- Working temperature max. 356°C

Applications:

- Western blotting
- Northern blotting
- Southern blotting
- Protein and immunoblotting

Additional Information

No.	6-0001
Manufacturer (Brand)	qpore
EAN	4058072169497
Transport temperature	Room temperature
Wide	30 cm
Length	300 cm
Material	Cellulose nitrate
Format/ Packing	Roll
Material membrane	Cellulose nitrate
Pore size	0.45 µm
Type filter	Transfer membrane
