## Description

Grade 595 ½ Qualitative Filter Paper Folded (Prepleated), 125 mm A prepleated filter used for many routine analytical applications in different industries (e.g., particle separation from food extracts or filtration of solids from digested environmental samples, e.g., for ICP/AAS analysis). Savings in time required to quadrantfold circles to fit conical filter funnels in repetitive or multiple analyses. Decreased overall filtration time because of the extra surface area exposed; the normal slow down of filtration speed due to the loading of particulate is postponed. Increased total loading capacity as more filter area is available. Maintained flow rate due to the reduction in filter paper contact with funnel side and the self-supporting shape of the filter itself. The prepleating does not significantly affect any of the technical data, and the same figures may be used for the flat circles. Timesaving Whatman qualitative grades are offered in this convenient form, which gives major advantages over flat circles. Very popular, thin filter paper, mediumfast with medium to fine particle retention. Used for many routine analytical applications in different industries (e.g., particle separation from food extracts or filtration of solids from digested environmental samples, e.g., for ICP/AAS analysis). Also available in flat stock form as Grade 595. Grade 595 ½: 47 µm

## Additional Information

No.	VL-0146
Manufacturer (Brand)	Whatman
VGKL number	250206504
EAN	4058072177096
Gross weight	0.121
Transport temperature	Room temperature
Storage temperature	Room temperature
Net weight	0.12100 kg
Country of origin	Germany
Packing width	0.04700 m
Packing height	0.06900 m
Packing depth	0.12700 m
Customs tariff number	48232000
