Description

The **sterile Safety-Cap reaction tubes** feature a stable lid lock that prevents uncontrolled opening of the tubes, e.g. during incubation. Especially when working with valuable samples as well as radioactive substances or DNA, a secure closure is essential. The reaction vessels are IVD certified and therefore also suitable for biological samples in in-vitro diagnostics.

- autoclavable when open at 121 °C, 20 min
- 2.0 ml to 20,000 g centrifugable
- DNase- / RNase-, PCR inhibitors, endotoxin-, DNA- and ATP-free
- high chemical resistance
