Product Images

Description

Highly sensitive, amplified chemiluminescent substrate for the detection of immobilized proteins (Western blot) or nucleic acids (Southern and Northern blot) either directly labeled with horseradish peroxidase (HRP) or indirectly labeled with HRP-labeled antibodies/streptavidin.

Substrate is quickly prepared by mixing component A (luminol/enhancer solution) with component B (stabilized peroxide solution) in a 1:1 ratio.

- Very high sensitivity, detection limit in the mid-femtogram range
- Very long and stable light emission over 12 hours
- Primary antibody dilution 1:1000 - 1:15 000
- Secondary antibody dilution 1:25 000 - 1:150 000
- Detection can be done with film or a CCD image documentation device

Additional Information

No.	SV-0080
Manufacturer (Brand)	SERVA
EAN	4058072372170
Transport temperature	Room temperature
